

SecureConf

Web Conferencing Software

Disrupting the Global Web Conferencing Market by offering either a revenue share or source code sales of unique product. Our product can be fully branded by an end-user in minutes. Software includes full API and SSO for global scaling.

SecureConf

Problem

No one is offering a web conferencing product for the SaaS and global Telecom markets that allows for either a 70% revenue share or source code ownership for 100% retention of profit.

SecureConf

Solution

The SecureConf source code creates a completely branded web conferencing solutions in minutes without programmers reducing ongoing costs by 95%. We offer the highest meeting security. Servers can be installed behind a corporate firewall. Unrestricted number of branded sites, users and servers.

SecureConf

Unique Product Features

- Each moderator has both a public library and a private library of videos, pictures and music. A moderator with a slow connection can play high resolution videos because libraries are on a server.
- Easiest to understand user interface available
- Ability to both make recordings and play them in a meeting without stopping meetings.

SecureConf

Potential Clients

- Global Telecom Carriers
- Hospitals to maintain HIPAA compliance
- Web hosting companies
- Any SAAS company to offer custom branded web conferencing to their existing clients

SecureConf

Market Size

In 2024 \$14.1B growing at 10.9% annually

SecureConf

Business Model

Revenue share of 70% to client with client providing end-user hosting services, or sale of source code.
